The background of the cover is a composite of three histological images of oral tissue, stained with hematoxylin and eosin (H&E). The top right image shows a cross-section of stratified squamous epithelium with a prominent keratinized layer. The middle image is a horizontal strip showing a transition from normal-appearing epithelium on the left to more disorganized, possibly dysplastic tissue on the right. The bottom right image shows a lower magnification view of the same tissue type, highlighting the overall architecture and cellular morphology.
